

Samsung to Unveil the World's First WiBro (Mobile WiMAX) Handsets

November 15 2005

Samsung will demonstrate WiBro (Wireless Broadband; Korean brand name of Mobile WiMAX) mobile phones and systems at the “2005 APEC IT Exhibition” during the Asia-Pacific Economic Cooperation (APEC). Various applications such as broadcasting, home networking, video telephony, VOD, and navigations will be presented at the exhibition with Samsung’s latest WiBro (Mobile WiMAX) handsets.

As WiBro gets prepared to be fully implemented and utilized in the market next year, Samsung will put on display both the mobile phone-typed H1000 and the PDA-typed M8000.

The H1000 is a clamshell designed phone that can be opened both horizontally and vertically with a QWERTY key pad. It has 2.2 inch LCD screen to enhance email and internet capabilities. The H1000 also has dual cameras (2 megapixel and VGA level) and TV Output function. The M8000 is a smart phone equipped with a QWERTY key pad for easy email usage. Additionally, Samsung will feature a WiBro PCMCIA card that can be used in laptops and Tablet PCs.

Samsung will present live demonstrations of WiBro service in a special vehicle for participating APEC and IT industry leaders with Korea Telecom (KT), Korea's largest telecommunications operator. Samsung supplied and installed WiBro systems including 12 RAS's (Radio Access Station) at 9 main spots in Busan and devices for KT's WiBro demonstrations.

“We are proud to present the world's first WiBro terminals and latest DMB phones to the leaders attending the APEC meeting. The WiBro services will be commercialized next year and we will lead this market by providing innovative products to our consumers and provide a shift in paradigm to ease one's lives,” said Mr. Kitae Lee, President and CEO of Samsung's Telecommunications Network Business.
