

# Briefs: Czech's Eesky forming IP television brand

February 20 2006

---

Eesky Telecom is deep into the process of forming an Internet Protocol Television (IPTV) service for the Czech Republic.

Czech Business Weekly reported Monday that the fixed-line telecom major had eight television and five radio stations signed up for the service, which was pointed to a launch in late June.

A limited test was under way Monday among about 200 Eesky Telecom employees. Once commercially available, the IPTV service will offer major news channels as well as a variety of undisclosed entertainment stations.

The service will run across Eesky's fixed-line infrastructure, which can deliver the necessary broadband access to about 90 percent of its subscriber base.
