

Bill would open scientific research access

May 3 2006

The Alliance for Taxpayer Access announced its support Tuesday for a Senate bill that broadens access to federal scientific research.

The bill, called the "Federal Research Public Access Act of 2006," was introduced by Sen. John Cornyn, R-Texas, and Sen. Joseph Lieberman, D-Conn. The proposal would require federal agencies that fund more than \$100 million in annual external research to make electronic manuscripts of peer-reviewed journal articles stemming from their research publicly available via the Internet.

"The expanded access to research called for by this bill will help accelerate true innovation in science and medicine," said Heather Joseph of the Scholarly Publishing and Academic Resources Coalition, an ATA organization. "The public's interest is clear; whether it is speeding a response to a potential flu pandemic, developing energy alternatives or putting the brakes on global warming, access to publicly funded science is more critical than ever." Joseph added,

ATA members include the Genetic Alliance, Parent Project Muscular Dystrophy, the Christopher Reeve Foundation, and 67 other patient, academic, research, and publishing entities that support expanded public access to the results of federally funded research.
