

Lenovo Powers Up Its Strongest, Coolest and Quietest ThinkPad Lineup Yet

May 9 2007

Lenovo today announced two new ThinkPad notebooks PCs - the first ThinkPad T61 14.1-inch widescreen notebook and the first ever R Series widescreen, the ThinkPad R61 14.1-inch widescreen notebook.

Lenovo engineered the PCs with its latest innovations, including a new Top Cover Roll Cage for excellent durability, an improved cooling system, enhanced wireless connectivity with Ultra Connect II and longer battery life through its Battery Stretch control option. Featuring the latest Intel Centrino Pro and Intel Centrino Duo mobile technology, the ThinkPad T61 and R61 14.1-inch widescreen notebooks, respectively, offer users the strongest, coolest, quietest and best performing ThinkPad lineup yet.

Lenovo also today introduced the Lenovo 3000 N200 15.4-inch widescreen notebook offering top connectivity and graphics capabilities with the latest Intel Centrino Duo mobile technology.

Engineered with a new Top Cover Roll Cage in addition to the original hard drive magnesium roll cage, the new notebooks provide rock solid reliability with top to bottom protection. The new honeycomb-designed roll cage cushions the notebook's LCD, reinforcing the screen and helping reduce stress on the display structure and antenna. The new Top Cover Roll Cage reduces the stress on the LCD screen by 25 percent on average when the notebook is dropped compared to previous ThinkPad notebooks. Combined with features like the airbag-like sensor of Lenovo's Active Protection System and a shock-mounted hard drive,

these notebooks provide the highest level of Lenovo notebook reliability and durability.

Lenovo offers its best wireless performance with Ultra Connect II. This connectivity design helps reduce the effect of conductive material and LCD noise, boosting WWAN and WLAN performance and eliminating the need for external antennas. The notebooks offer several different connectivity options such as WWAN (on select ThinkPad T61 models) and WLAN with 802.11n technology, GB Ethernet LAN, Bluetooth and modem. When used with Access Connections, Ultra Connect II helps give road warriors an easy to manage wireless experience.

Owls are known for their silence during flight, and the unique shape of an owl's wing inspired the design behind Lenovo's improved cooling system design. The system reduces surface temperature by up to 10 percent and lowers the noise level by three decibels over previous ThinkPad notebooks, giving Lenovo its coolest and quietest notebooks yet.

Lenovo puts users in the driver's seat for up to 15 percent longer battery life with Battery Stretch. Whether it's finishing a presentation or watching the end of a DVD, Battery Stretch allows individuals to select and manage options like minimizing refresh rates and disabling radios and Bluetooth options in the Power Manager ThinkVantage Technology software to maximize their battery life.

The new notebook PCs offer cutting-edge security with select models offering full disk encryption hard drives, an integrated biometric fingerprint reader and a smart card reader. Users can also opt for Intel Turbo Memory with both notebooks and new IT management capabilities with Intel Active Management Technology in the ThinkPad T61 14.1-inch widescreen. To enhance the multimedia experience, the notebooks offer choices of Intel integrated or NVIDIA discrete graphics

and a four-in-one media card reader. Users can also opt for an integrated camera with the ThinkPad R61 14.1-inch widescreen notebook.

Lenovo gives customers another smart choice for doing business with the Lenovo 3000 N200 15.4-inch widescreen notebook. This notebook features leading technology in a thin and light form all at a good value. With today's always-connected environment in mind, the notebook offers WLAN with 802.11n technology, 10/100 Ethernet and Bluetooth connectivity options. Integrated fingerprint readers help individuals manage their passwords and information. And to help lower the total cost of PC ownership, Lenovo Care Tools help manage IT tasks with automatic updates, one-button system recovery and simple network connectivity.

Choices of Intel integrated graphics or NVIDIA discrete graphics combined with options like an integrated camera and microphone, a five-in-one multcard reader and Vibrant View display add up to an excellent multimedia experience.

The ThinkPad T61 and R61 14.1-inch notebooks start at approximately \$1,399 and \$1,249, respectively, and will be available in mid-May. The Lenovo 3000 N200 15.4-inch widescreen notebook starts at approximately \$1,099.
