

New Nokia N810 Internet Tablet hits store shelves

November 19 2007

Nokia N810

Nokia announced today that the new Nokia N810 Internet Tablet has begun shipping nationwide in the United States. With a new slide-out keyboard, built-in GPS, digital audio/video playback and Wi-Fi capability for VoIP calling, the Nokia N810 provides the functionality of a traditional computer but all in one sleek, stylish and portable device.

"More than ever, people want to bring their online communities with them wherever they go - whether it's on vacation, a business trip, or just around their neighborhood - and the pocketable Nokia N810 Internet Tablet lets consumers do just this," said Bill Plummer, Vice President,

Multimedia, Nokia North America. "As consumer demand increases for new multimedia experiences, Nokia is taking the leadership position to create new devices that meet this demand and maximize the experience for the user."

The Nokia N810 provides a premier, portable internet experience with its large color display, touchpad screen, slide-out keyboard, 400 MHz processor, Mozilla-based browser and up to 10GB of memory (an optional 8GB memory card combined with 2GB internal memory). To access the Internet, users simply connect via the nearest Wi-Fi hotspot or over Bluetooth on a mobile phone. Connecting to the Internet allows the user to stay connected with friends and family through VoIP calling, instant messaging and e-mail. Users can also access their online communities by checking Facebook or Flickr accounts and see what's new in the lives of those they care about.

With up to 45 hours of music playback, storage for up to 7,500 songs and built-in GPS, the Nokia N810 is perfect for the person on the go. The Nokia N810 comes with free maps preloaded for users to browse detailed locations, search for street addresses, find various points of interest (POI) as well as nearby Wi-Fi hotspots. Wayfinder will offer subscription based service for navigation over the Maps application; a 3-year license for \$129.99 available in December.

The Nokia N810 is powered by maemo Linux-based OS2008, updatable in December also on the Nokia N800, the earlier internet tablet generation hardware. The maemo Linux-based OS2008 features a highly customizable user interface and contains various novelties such as a Mozilla based browser with Ajax and Adobe flash 9, Bluetooth headset support as well as enhanced video and audio features. The refreshed Video Gizmo, Skype and Rhapsody highlight some of the most popular downloads available while Boingo Wireless, Earthlink and The Cloud enable Wi-Fi connectivity, across thousands of different locations

globally.

The Nokia N810 is available at consumer electronics and wireless retailers in key markets, such as select Best Buy Mobile retailers, CompUSA, Micro Center, and the Nokia Flagship stores in Chicago and New York, and a growing number of online retailers including amazon.com, buy.com, circuitcity.com, nseries.com and pcmall.com. The manufacturer's suggested retail price is \$479 USD.
