

Google adds automatic translation to Gmail

May 20 2009

Visitors stand in front of Google logos at a fair in 2007. Google added automatic translation technology to Gmail on Tuesday, allowing users of its email service to translate messages in another language with a single mouse click.

Google added automatic translation technology to Gmail on Tuesday, allowing users of its email service to translate messages in another language with a single mouse click.

The Mountain View, California-based Internet giant said it had integrated its Google Translate program into Gmail, allowing automatic [translation](#) of messages in several dozen languages.

"When you receive an email in a language other than your own, Gmail will help you translate it into a language you can understand," Google said in a post on the company blog.

"If all parties are using [Gmail](#), you can have entire conversations in

multiple languages with each participant reading the messages in whatever [language](#) is most comfortable for them," Google said.

Google has already made Google Translate available to provide automatic translations of entire Web pages or blogs.
