

Lenovo Intros Its First 12-Inch Netbook: IdeaPad S12

May 26 2009

Lenovo today announced the IdeaPad S12, the company's first 12-inch netbook. The new netbook brings users the next level in netbook computing with improved usability and performance. Enhancements include a 12.1-inch screen, a 100 percent full-size keyboard and new graphics options with the NVIDIA ION platform.

Whether it's looking at photos, playing music, emailing or cruising

online, consumers want smaller and more portable PCs. The Lenovo IdeaPad S12 [netbook](#) is raising the bar for higher levels of netbook computing with choices of the Intel Atom processor with Intel integrated graphics or the Intel Atom processor with NVIDIA ION graphics. Also, for the first time on a netbook with NVIDIA's ION graphics platform, users will be able to enjoy brilliant 1080p high definition video with silky smooth playback.

The IdeaPad S12 netbook offers plenty of up and running time with up to six hours of battery life to support the mobile demands of netbook users. Because netbook users need to stay connected wirelessly, the netbook comes with WiFi connectivity and ready for 3G with an ExpressCard slot to enable connectivity. To hold the photos, music and videos users keep on their netbooks, the IdeaPad S12 netbook offers ample hard drive [storage](#) and [memory](#) with up to 160 GB of storage and 1 GB of memory. For peace of mind in case data becomes corrupted, Lenovo's OneKey Rescue System can help recover user data or device settings.

In addition to the netbook's sleek and sophisticated ring pattern design in black or white, users can make the netbook their one-stop entertainment device, starting from the moment they turn it on. Lenovo's expanded VeriFace facial recognition technology makes logging in a snap by recognizing the user's face. If users want "on demand" functionality, they can go into the Lenovo Quick Start environment and check email, browse the Internet and more without waiting for the full operating system to boot. They can also don any set of headphones and enjoy surround sound audio with Dolby Headphone technology. If opting to watch video on an external monitor, they can easily connect through the netbook's VGA port or HDMI port on select models. They can also choose among several multimedia formats to upload through the 4-in-1 multiscard reader.

Lenovo designed the IdeaPad S12 netbook for consumers looking for a super thin, portable and affordable device that offered a familiar, computing experience. Lenovo enlarged the netbook's WXGA screen from 10.1 inches to 12.1 inches for better viewing and made the keyboard 100 percent the size of a full-size laptop to make typing easier and less cramped. And when it comes to portability, by measuring less than an inch thick, the netbook leads the industry for thinness compared to other 12-inch netbooks. The lightweight IdeaPad S12 netbook weighs in at just three pounds.

The IdeaPad S12 netbook will be available in June. Pricing for models starts at \$449. Models with the NVIDIA ION graphics will be available later this summer.
