

# Carbon emissions fall with global downturn: report

September 21 2009

---

Locked gates protect a shut-down gas station in San Francisco, California. Greenhouse gas emissions have fallen thanks to the global downturn, handing the world a chance to move away from high-carbon growth, a report said Monday, citing an International Energy Agency study.

Greenhouse gas emissions have fallen thanks to the global downturn, handing the world a chance to move away from high-carbon growth, a report said Monday, citing an International Energy Agency study.

The unpublished IEA study found carbon emissions from burning [fossil fuels](#) had dropped significantly this year -- further than in any year in the past four decades.

Falling industrial output is largely responsible for the plunge in emissions, but other factors also played a role, including shelving plans

for new coal-fired power stations because of falling demand and lack of financing.

The fall will exceed the drop in the 1981 recession that followed a crisis in the oil markets, according to the results of study published in the Financial Times newspaper.

"We have a new situation, with the changes in energy demand and the postponement of many energy investments," said Fatih Birol, the IEA's chief economist.

"But this only has meaning if we can make use of this unique window of opportunity. (That means) a deal in Copenhagen."

The December meeting in Copenhagen, under the UN Framework Convention on [Climate Change](#), aims to set down action for tackling heat-trapping carbon emissions beyond 2012, when the current provisions of the [Kyoto Protocol](#) run out.

Government policies to cut emissions have also had an impact on emission levels, with the IEA estimating that about a quarter of the reduction is the result of regulation.

The study is an excerpt from the Paris-based IEA's annual World Energy Outlook, which will be published in November. The excerpt will be released early next month ahead of the Copenhagen meeting, according to the FT.

The report also comes as world leaders converge on New York and Pittsburgh this week for pivotal talks in the two-year effort to remake global climate rules, ahead of Copenhagen.

Birol said a global agreement was needed in Copenhagen to encourage

companies to cut emissions.

"We hope that an agreement in Copenhagen would give a signal for new investments to go in (an environmentally) sustainable direction," he said.

"If we miss this opportunity, it will be much more expensive and therefore harder than ever to bring the world's energy system on to a sustainable path."
