

New Set of High-Resolution Mars Images Online

October 8 2009

Thousands of image products from 233 recent telescopic observations by NASA's Mars Reconnaissance Orbiter show a diversity of surface shapes and textures on Mars. Image Credit: NASA/JPL-Caltech/University of Arizona

Thousands of image products from 233 recent telescopic observations by NASA's Mars Reconnaissance Orbiter show a diversity of surface shapes and textures on Mars.

These views, captured during August 2009 by the orbiter's [High Resolution Imaging Science Experiment](#) camera, are on the camera team's University of Arizona Web site, at: hirise.lpl.arizona.edu/releases/oct_09.php .

The [Mars Reconnaissance Orbiter](#) has been studying Mars with an advanced set of instruments since 2006. It has returned more data about the planet than all other spacecraft combined. For more information

about the mission, visit: www.nasa.gov/mro .

The Mars Reconnaissance Orbiter is managed by the Jet Propulsion Laboratory, Pasadena, Calif., for NASA's Science Mission Directorate, Washington. JPL is a division of the California Institute of Technology, also in Pasadena. Lockheed Martin Space Systems, Denver, is the prime contractor for the project and built the spacecraft. The High Resolution Imaging Science Experiment is operated by the University of Arizona, Tucson, and the instrument was built by Ball Aerospace & Technologies Corp., Boulder, Colo.
