

Dell Launches World's Fastest Office Color Laser Printer

November 12 2009

Dell 5130cdn

(PhysOrg.com) -- Dell today announced three new commercial workgroup printers to help businesses of all sizes increase productivity and lower their total cost of printing.

Printers available today in the United States include the Dell 5130cdn, the worlds fastest single function letter-size office color [laser printer](#), the Dell 7130cdn, Dell's first LED color printer with tabloid-size [printing](#) capability; and the Dell 3330dn, a single-function monochrome laser printer for high performance black and white printing.

The Dell 5130cdn can print up to 47 single-sided and up to 37 double-sided letter pages per minute (ppm) in both mono and color, making it

the world's fastest letter size single-function office color laser printer. The 5130cdn also premieres ColorbyDell, a total print quality solution that delivers excellent [color saturation](#) and image sharpness and outstanding print quality. This is enabled through a combination of a powerful new image enhancement algorithm, advanced toner technology and improvements in print engine design. The Dell 5130cdn is also designed to bring significant energy and cost savings by using a new toner formulation that fuses at a lower temperature, enabling a remarkable Cost Per Page (CPP) of 1.04c for black and white and 7.71c for color print outs.

To help companies reign in the costs of their color printing, Dell also announced the availability of Dell ColorTrack Pro—a built in remote administration tool for IT administrators to centrally monitor and control access to color printing on the Dell 5130cdn. Designed for workgroup environments, Dell ColorTrack Pro manages user access at the server level, to easily control printing and toner costs.

The Dell 7130cdn is Dell's first LED-based color printer with the ability to print up to tabloid-size, high quality Pantone approved color prints, for accurate color reproduction. With its ability to bring professional quality color printing in-house with low cost and outstanding printing options, the Dell 7130cdn includes a rich feature set, including numerous paper handling options, a powerful processor and robust memory. This allows the printer to print the first page (First Print Out Time) as quickly as 6.5 seconds in both mono and color. The Dell 7130cdn is available today in the US from \$2,799.

On the black and white printing front, Dell announced the Dell 3330dn, a single-function black and white performance printer that can print up to 40 letter pages per minute (ppm) (actual print speed will vary with use), with a monthly duty cycle up to 80,000 pages. Built for high performance printing needs, the Dell 3330dn packs work-horse

reliability, and has paper drawer and memory expansion options that grow with increasing business demands. The Dell 3330dn is currently available from today in the US from \$599.

These new printers will be launched and available in Europe and the Middle East on Nov. 24.
