

Ruins of 7th century Arab palace identified in Israel

March 16 2010

An archeologist cleans the stone engraved with a seven-branched Menorah (candelabrum), in Israel, in 2009. Ruins in northern Israel previously thought to have been a synagogue have now been identified as a 7th century palace used by the Umayyad caliph who started construction of Jerusalem's Dome of the Rock, archaeologists said on Tuesday.

Ruins in northern Israel previously thought to have been a synagogue have now been identified as a 7th century palace used by the Umayyad caliph who started construction of Jerusalem's Dome of the Rock, archaeologists said on Tuesday.

The site on the shores of the Sea of Galilee is that of the Al-Sinnabra palace, which was described by early Arab historians but whose precise location had long been unknown, according to Tel Aviv University, whose Institute of Archaeology led the recent excavations.

[Archaeologists](#) dug up the site in the early 1950s but identified it as the ruins of an ancient synagogue, a theory that was questioned in 2002 by a University of Chicago expert who identified the site as that of the Al-Sinnabra palace.

The latest excavations and research by the Hebrew University in Jerusalem confirmed the site was that of the palace where the Umayyad rulers would spend the winter months.

Among the caliphs who used the [palace](#) was Abd al-Malik, who initiated construction of the Dome of the Rock at the Al Aqsa Mosque compound which is Islam's third holiest site after Mecca and Medina in Saudi Arabia.

The Umayyads were an early Arab Muslim dynasty that ruled much of the Middle East and North Africa from 661 to 750 AD.
