

Samsung unveils fridge with built-in Internet

March 4 2010

South Korea's Samsung Electronics Thursday unveiled a hi-tech alternative to the fridge magnet -- a refrigerator with Internet access that can display family photos or recipes on a screen.

The door of the "Zipel e-Diary" features a 10-inch (25 cm) touch screen equipped with locally developed wi-fi software, allowing users to monitor Internet news and weather and store or display pictures and data.

It also can send and receive pictures from mobile phones.

The Zipel e-Diary, priced at 2.49 million won (2,174 US dollars), targets domestic consumers and Samsung has no immediate plan to sell it abroad.
