

Apple to fix security hole in iPhone software

August 5 2010

(AP) -- Apple is planning to release a fix for a security hole in the software that runs on its iPhone, iPad and iPod Touch devices.

Hackers could gain access to data stored on Apple Inc.'s gadgets by putting a PDF file with hidden code onto a website and luring people to visit the site.

Apple did not say when the software update will be available.

The flaw drew attention after it was used for a program that lets people "jailbreak" iPhones in order to run programs [Apple](#) hasn't approved for sale in its iTunes store.

The company declined to say Thursday whether it knows of malicious hackers actively exploiting the flaw.

A German government agency issued an official warning about the flaw Wednesday.
