

Site issues cause outage for some Facebook users

October 6 2010

(AP) -- Facebook says unspecified site issues caused the social-networking site to be slow or unavailable for some of its 500 million users.

Facebook spokeswoman Kathleen Loughlin said in an e-mail to The Associated Press just before 10 p.m. PDT Tuesday that the company was working on the problem. She said in another e-mail at 10:25 PDT that the issue was resolved.

Loughlin didn't say when [Facebook](#) began acting up, but the phrase "Facebook Isn't Working" was one of the top trending topics late Tuesday on another social-networking site, [Twitter](#).

Facebook also experienced a [technical glitch](#) on Sept. 23 that blocked or slowed access for several hours. Tuesday's outage came 12 hours before the company was to make announcements at an invite-only event at its Palo Alto, Calif., headquarters.
