

# Tablet computer sales to hit 208 million in 2014

October 15 2010

---

Apple customer Han Ziwen holds up his ipads outside a Apple's flagship store in Beijing after queueing for 60 hours to be one of the first to officially buy an iPad in China on September 2010. Sales of tablet computers like Apple's iPad are expected to soar from nearly 20 million units this year to 55 million next year and over 208 million in 2014, market research firm Gartner said Friday.

Sales of tablet computers like Apple's iPad are expected to soar from nearly 20 million units this year to 55 million next year and over 208 million in 2014, market research firm Gartner said Friday.

Gartner said North America will account for 61 percent of [tablet computer](#) sales this year but its share will drop to 43 percent in 2014.

Gartner forecast worldwide sales of tablet computers of 19.5 million units in 2010, 54.8 million units in 2011 and more than 208 million units

in 2014.

Apple began selling its [iPad](#) in April and a number of other companies have announced plans to begin producing the multi-media devices, which can be used to surf the Web, read electronic books, watch video and more.

Gartner said the explosion in tablet computers will impact sales of devices in other segments including netbook computers, the small laptops also known as mini-notebooks.

"The all-in-one nature of media tablets will result in the cannibalisation of other consumer electronics devices such as e-readers, gaming devices and media players," Gartner research vice president Carolina Milanesi said.

"Mini notebooks will suffer from the strongest cannibalisation threat as media tablet average selling prices drop below 300 dollars over the next two years," Milanesi said.
