

Google opens Malaysia office

January 26 2011

Julian Persaud, Managing Director of Google Southeast Asia, speaks at a press conference along with Malaysia's deputy trade and industry minister Mukhriz Mahathir (R) in Kuala Lumpur on January 26, 2011. The web titan has said it will open a Malaysian office, its second in Southeast Asia, following significant growth in Internet usage in the country.

Search engine Google said Wednesday it will open a Malaysian office, its second in Southeast Asia, following significant growth in Internet usage in the country.

Google Southeast Asia chief Julian Persaud said Malaysia has one of the "highest percentages of usage of Google's Web browser, Chrome, in Asia Pacific" together with 17 million Internet users from a population of 27 million.

"The online environment in Malaysia is growing rapidly, with significant developments in both broadband Internet access and e-commerce

activities," he told reporters.

"We are pleased to establish our newest operations in Kuala Lumpur, where we can draw from the highest quality local talent to further help users find the information they're looking for," he added.

Persaud said Google was targeting small and medium enterprises in Malaysia with its "search and display" services, aimed at helping them reach new markets.

He said the Malaysian operations, set up four years after the creation of Google's first Southeast Asian office in Singapore, would customise products such as [Google Maps](#), Google News and Google Translate for the local market.

Google said it will hire a record number of people this year, taking on more than 6,000 workers worldwide.

Persaud also said the return of co-founder Larry Page to the company's helm in April would not affect operations in the region.

"I don't see it as much of a change as the current CEO will still be in the company... It's business as usual," he said.

Last week, in a surprise shakeup of its top management, the California-based company announced that [Eric Schmidt](#), its chief executive over the past decade, would step aside in April and be replaced by Page.

Despite revenues of nearly \$30 billion last year, [Google](#) is under pressure from new rivals such as [Facebook](#) and [Twitter](#) for the attention of Web surfers, advertising dollars and engineering talent.
