

US House votes to curb climate regulation

April 7 2011

The US House of Representatives on Thursday approved a bill aimed at preventing the Environmental Protection Agency (EPA) from regulating greenhouse gases blamed for global warming.

The US House of Representatives on Thursday approved a bill aimed at preventing the Environmental Protection Agency (EPA) from regulating greenhouse gases blamed for global warming.

The 255-172 vote in the Republican-held chamber came a day after the Democratic-led Senate rejected such a move, making it highly unlikely lawmakers will actually move to curb EPA's regulatory powers.

US President [Barack Obama](#) has already signaled he opposes such a step, but Republicans have said EPA's moves to limit such emissions could dampen job creation as the economy drags itself out of the worst downturn in 80 years.

Republicans have also sought to tie the measure to a sharp rise in gasoline prices, saying new restrictions would drive energy costs sharply higher.

The US House of Representatives approved a cap-and-trade bill to fight [climate change](#) in 2009, but the Senate never approved such a measure.
