

Lenovo to release a 23-inch tablet PC this year?

April 13 2011, by Katie Gatto

Lenovo ThinkPad X200t tablet

(PhysOrg.com) -- According to sources inside the company, Lenovo is hoping to release a 23-inch tablet PC by the end of this year. The source, William Cai, is a senior specialist in marketing at a Lenovo. The information was released during a discussion at the 2011 Gadget Show Live.

Despite the fact that 23 inches is a fairly standard size for a [desktop computer](#) monitor, this would represent a significant increase in size, when compared to previous tablet offerings made by Lenovo.

When it comes to tablets, size may be a good feature in terms of reducing screen strain, but it also creates a series of new challenges. One

of the most pressing of those challenges is [battery life](#). A larger screen will undoubtedly consume more [battery power](#) to illuminate than a smaller screen. This will mean that either the machine will need to have a larger battery, or perhaps that the machine will work in conjunction with a docking station, as several blogs have speculated.

It is also possible that Lenovo will make the 23 inch tablet part of a convertible system. The company has previously done this with their ThinkPad X Series Tablet, which is no longer available for sale on the [Lenovo](#) site.

No information on a potential release date, or a price point have been released at this time. At this time, all that the company has said is that it would like to release this 23 inch tablet by the end of this calender year, but none of the plans are solid.
