

Seagate portable storage goes wireless (w/ video)

May 16 2011, by John Messina

Seagate's GoFlex Satellite HD lets you store up to 300 movies and stream directly 3 iPads at the same time. You can also automatically sync media and documents from a PC or Mac computer.

(PhysOrg.com) -- Seagate's GoFlex Satellite is the first portable hard drive, with integrated Wi-Fi and battery pack, that lets you stream 500 GB directly to any mobile or Wi-Fi equipped device without using any cables.

Seagate's 500 GB drive isn't much physically larger than some of their other portable storage devices however the lithium-ion [battery](#) provides portable power that last up to 5 hours of continues video streaming and 25 hours of standby.

[Seagate](#)'s GoFlex Satellite is able to create its own wireless hotspot to stream media to any device equipped with a Wi-Fi connection. The device is capable of making three separate connections simultaneously, and can stream an HD movie over each one of those connections up to 150 feet away with no picture freeze ups.

Seagate has also developed an app for the new iPad and iPhone specifically designed for the drive. The app can buffer an entire movie in less than seven minutes, minimizing the time that the drive is actually in use and conserving the battery. Video can also be streamed to any [Wi-Fi](#) enabled device using a web browser.

Video below is a review of Seagate's GoFlex Satellite HD performed by Engadget.

Seagate's GoFlex Satellite is available immediately for preorders from Seagate.com and will be available later this summer. No specific date has been released.
