

College-educated undocumented young adults face same narrow range of jobs as their parents

July 26 2011

Roberto G. Gonzales is a sociologist studying the life histories of undocumented young adults raised in the United States. He is an assistant professor at the University of Chicago's School of Social Service Administration, and previously an assistant professor in the University of Washington's School of Social Work. Parents who move to the United States without legal status generally seek better opportunities for their young children. Their kids grow up Americanized: speaking English, attending public school, going to the prom and dreaming about what they want to do when they grow up.

Many assume these youths will achieve more than their [parents](#). But a survey of life trajectories of undocumented [young adults](#) raised and educated in America shows that they end up with the same labor jobs as

their parents, working in construction, restaurants, cleaning and childcare services.

The results appear in the August issue of [American Sociological Review](#).

"This is a [population](#) of young people who, because of their legal integration through the school system, learned to work hard and pursue the American dream," said Roberto G. Gonzales, author of the survey and an assistant professor at the University of Chicago's School of Social Service Administration. "Many of them grew up believing that being able to speak English and having an [education](#) should be able to get them more than their parents."

Gonzales did the study while he was an assistant professor at the University of Washington's School of Social Work. He conducted life history interviews with 150 mostly Mexican-origin undocumented young adults – about equal numbers of men and women – who had been brought to the U.S. before age 12. The [respondents](#) lived in the Los Angeles metropolitan area and were 20 to 34 years old.

His findings could illuminate how current immigration laws don't adequately accommodate the ever-increasing number – now at 2.1 million – of children and young adults who are brought to the U.S. as children and left to figure out how to navigate their adult lives without legal status.

"Through the U.S. public school system, undocumented children are integrated into the legal framework of this country," Gonzales said. "But as they reach adulthood, they are cut off from the means through which to live the lives for which school prepared them."

Gonzales, a sociologist, wanted to learn how undocumented youths learn of their immigration status and how they come to cope with its effects

on their identity, friendships, career aspirations and daily lives.

Most of the people surveyed told Gonzales that they first felt the effects of their non-legal status between the ages of 16-18, usually when they sought part-time jobs, driver's licenses or admission to college, which require a social security number.

Many respondents told Gonzales that they felt confused, angry, frustrated, scared and stigmatized when they learned of their immigration status. Their social habits changed out of fear of who to trust. Career plans halted. Arrest and deportation became constant threats for many, Gonzales said.

Returning to their native country was not a viable option for most of the respondents, because they lacked important social and professional connections, job options, Spanish fluency and familiarity with the culture and customs of their birth country.

Miguel, one of the respondents, had intended to go to college and then law school. When his mother told him in high school that he wasn't legal, he said: "I didn't know what to do. I couldn't see my future anymore."

Cory, age 22, blamed her parents for not telling her sooner about her non-legal status. "I feel like a kid, I can't do anything adults do," she said. Most respondents expressed similar sentiments of developmental limbo.

Seventy-seven of the respondents decided to go to college as a way to stay legally protected by the school system and to try to improve their career options. Relationships with teachers, friends and family were key to whether the respondents attended college, Gonzales found.

But college experience didn't help the respondents broaden their job options. Once they left school, they faced the same narrow range of [jobs](#)

as their parents and high school peers who did not go to college. None of the 22 respondents who had graduated from four-year universities, or the nine who held graduate degrees, was able to legally pursue their chosen careers.

By their late 20s, respondents reported coming to grips with their illegal status, focusing on what they could do rather than what they couldn't.

Gabriel, a 28-year-old who attended some community college classes, told Gonzales that he sees work as just one piece of his life and that he gets more satisfaction out of his relationship with his girlfriend and being in a dance circle. "I just get sick of being controlled by the lack of nine digits," he said.

"His aspirations flattened, he accepted his fate," Gonzales said of Gabriel. "Is that why we educate our youngsters? Is that the future we want for them?"

Gonzales said that educators and policymakers have important roles to play in helping undocumented youth transition into adulthood. "The problems facing undocumented children and young adults underscore the need for a more diverse approach to immigration policy," he said.
