

India's Tata group to sell \$700 flat-pack house

July 17 2011

The Indian company that launched the world's cheapest car has unveiled its latest product for the fast-growing nation: a flat-pack house that costs just \$700 and can be built in a week.

The Indian company that launched the world's cheapest car has unveiled its latest product for the fast-growing nation: a flat-pack house that costs just \$700 and can be built in a week.

The [Tata group](#), maker of the \$2,500 Nano [car](#), said that the 20-square-

metre (215-square-foot) home comes from a pre-fabricated kit that includes doors, windows and a roof.

"We have already prepared two-three different designs based on discussions with users and are gathering more feedback," Sumitesh Das, the head of the project at Tata, told reporters in Hyderabad.

"Hopefully, in the next six-eight months we should be able to roll it out in the market nationally."

The basic model of a so-called "Nano" house will cost 32,000 rupees (\$720) and will use coconut fibre or jute for wall cladding and interiors. It has a life expectancy of 20 years.

The house, which is being tested in the state of West Bengal, will also be available in a larger 30-square-metre version and with additional features such as a solar panel for the roof and a verandah.

Tata hopes to sell the [house](#) to private buyers who have a plot of land available and also to state governments planning mass residential schemes for India's millions of destitute and homeless.

Das said Tata was using advice from panchayats (village councils) to fine-tune the design.

The Nano car drew worldwide attention when it was launched in 2009, but sales figures have not met expectations due to production delays and safety issues.
