

RIM set to launch BlackBerry music service: report

August 19 2011

A new model BlackBerry mobile phone is seen at an event in New Delhi. The Canadian firm is developing a new service that would allow subscribers to play music on their smartphones, the Wall Street Journal has reported.

Canada's Research in Motion (RIM) is developing a new service that would allow subscribers to play music on their BlackBerry smartphones, the Wall Street Journal has reported.

The option is "designed to work with RIM's BlackBerry Messenger," the newspaper reported, citing unnamed sources who had discussed the service with RIM executives.

The new service, to be known as BBM Music, could be launched "as soon as next week," and allow subscribers to access around 50 songs at one time for an as-yet unspecified price, the report said.

According to the paper, the company has already signed, or are preparing to sign, agreements with four music power houses -- Vivendi Universal Music, [Sony Music](#), Warner and EMI.

The move is aimed at attracting younger consumers to the product, which is facing tough competition from Apple's [iPhone](#) and others.

According to a study by ComScore published in July, the iPhone is now more widely used than the BlackBerry in the US market.
