

HTC Titan's a Mango monster: 4.7-inch Windows phone

September 8 2011, By Brier Dudley, The Seattle Times

If you can't decide between a small Web tablet and a smartphone, you can now compromise with an enormous phone.

HTC recently unveiled its Titan, a [smartphone](#) with a whopping 4.7-inch diagonal screen that's its largest ever for a phone. Yet it's only 9.9 millimeters thick (0.39 inches) and weighs 5.6 ounces.

The Titan is based on the new "Mango" version of the [Windows Phone](#) platform and will be released in October. Prices and carriers weren't disclosed in the release, only the specs.

Inside there's a 1.5 gigahertz processor, 16 gigabytes of storage and quad band radios. It has an 8 [megapixel camera](#) with F2.2 lens that captures 720p video, plus a 1.3 megapixel front-facing camera for videochat.

The phone looks to be one of the flagship Mango phones coming out this fall - alongside the Nokia "Sea Ray" - and going head-to-head with the new [iPhone](#).

HTC also unveiled the Radar, a more conventional Windows Mango phone, with a 3.8-inch screen and front-facing video camera.

Both have aluminum cases and dedicated camera buttons.

Also announced was the [HTC](#) Jetstream tablet, a 3G/4G LTE Android model with a 10-inch screen that's being offered by AT&T. It's \$700 with a two-year contract.
