

'Extinct' frog hops back into northern Israel

November 18 2011

In this photo made available by the Israel Nature and Parks Authority Thursday, Nov. 17, 2011, a Hula Painted Frog, a species believed to be extinct is seen in a nature reserve in northern Israel. Omri Gal of Israel's Nature and Parks Authority said Thursday that the Hula Painted Frog was seen for the first time in 50 years this week. In the 1940s, a specimen ate a second frog, leading to speculation the species is cannibalistic.(AP Photo/Dror Galili) EDITORIAL USE ONLY

(AP) -- A frog species believed to be extinct has hopped back into sight in northern Israel.

Omri Gal of Israel's Nature and Parks Authority said Thursday the Hula Painted [Frog](#) was seen for the first time in 50 years this week. He said it was declared extinct.

Gal said, "It's an amazing find, now we have a second chance to preserve the species."

The frog is native to the Hula Valley, a swamp drained in the 1950s to stop malaria.

Aquatic [ecologist](#) Dana Milstein says the frog was rare even before, and little is known about it. In the 1940s, a specimen ate a second frog, leading to speculation the species is cannibalistic.

She credited rehydration of the area for the frog sighting and said more are likely in the reserve.
