

Service offers transit directions avoiding stairs

November 10 2011

(AP) -- An online service that provides transit directions in several cities is now giving New Yorkers an option to avoid stairs.

HopStop partnered with Fit Pregnancy magazine to identify stations and routes that have elevators and other features for wheelchairs and strollers. In some cases, that could mean taking buses and avoiding subways. Or it could mean getting off the subway a stop or two early.

HopStop offers transit directions in more than 50 cities, mostly in North America. Travelers enter their starting location and destination just as they do when seeking [driving directions](#) at [Google](#) and other sites. HopStop then offers the best ways to get there by public transportation.

The stairless option is currently available only in the New York area. HopStop plans to add other markets this year.
