The Shuttle Carrier Aircraft glides down the runway of the Shuttle Landing Facility at NASA's Kennedy Space Center in Florida.

The aircraft, known as an SCA, arrived at 5:35 p.m. EDT to prepare for [shuttle](#) Discovery's ferry flight to the Washington Dulles International

Airport in Sterling, Va., on April 17.

This SCA, designated [NASA](#) 905, is a modified Boeing 747 jet airliner, originally manufactured for commercial use.

One of two SCAs employed over the course of the Space Shuttle Program, NASA 905 is assigned to the remaining ferry missions, delivering the shuttles to their permanent public display sites. NASA 911 was decommissioned at the NASA Dryden Flight Research Center in California in February.

Discovery will be placed on permanent public display in the Smithsonian's National Air and Space Museum Steven F. Udvar-Hazy Center in Chantilly, Va.
