

Wireless startup LightSquared files for bankruptcy

May 14 2012, By PETER SVENSSON , AP Technology Writer

LightSquared Inc., which hoped to create an independent wireless broadband network in the U.S., filed for bankruptcy protection on Monday.

Regulators blocked its plan this winter because of concerns that its transmissions would interfere with GPS navigation.

LightSquared hasn't given up. Chief Financial Officer Marc Montagner said in a statement that the [bankruptcy filing](#) is intended to gain the company "breathing room" while it continues to work through its regulatory issues.

It has said that it has invested more than \$4 billion in the network. LightSquared listed assets and liabilities of more than \$1 billion each in the filing Monday with the U.S. Bankruptcy Court for the Southern District of New York.

The company, which is based in Reston, Va., is owned by Harbinger Capital Partners, a private-equity firm that made billions betting against subprime mortgages ahead of the collapse of the housing market.

Harbinger bought SkyTerra, a provider of satellite communications services to businesses, in 2010. It then lobbied the [Federal Communications Commission](#) to allow it to use the spectrum set aside for SkyTerra for ground-based communications - essentially, a conventional [wireless broadband network](#), rather than a satellite-based

one.

But SkyTerra's licenses were for spectrum adjacent to a band used by [GPS satellites](#). On the ground, GPS units had no problem filtering out transmissions from SkyTerra's satellites, but regulators determined that they could be disrupted by strong, ground-based signals.

LightSquared's CEO, telecom veteran Sanjiv Ahuja, resigned in February.

The company's largest creditors are Boeing Satellite Systems Inc., owed \$7.5 million, and [telecom equipment maker](#) Alcatel-Lucent, owed \$7.3 million, according to the filing.
