

Twitter says its ads pay off for candidates

October 10 2012

Twitter released a study showing its paid messages pay off for political candidates, not only in garnering attention but in driving campaign contributions.

Twitter released a study Wednesday showing its paid messages pay off for political candidates, not only in garnering attention but in driving campaign contributions.

The study by the [marketing firm](#) Compete found the average Twitter user was 68 percent more likely to visit a campaign donation page than the average Internet user.

The likelihood increases when Twitter users are exposed to political [tweets](#) either from those they follow or "promoted" or paid messages.

"Twitter users exposed to any of these kinds of political tweets are almost twice as likely (97 percent) as other Twitter users to visit an online political donation page," said Twitter's head of political ad sales,

Peter Greenberger.

Greenberger said in a blog post that these Twitter users are more likely to donate and also become more engaged in a campaign.

He said the data didn't allow an analysis of individual campaigns but that increased [donation rates](#) by Twitter users were found to be very similar across all candidates and parties.

"We have always known that Twitter users are politically engaged; now we know that exposure to political tweets drives political contributions," he said.
