

US to require electric cars to make noise

January 7 2013, by The Associated Press

A U.S. government safety agency wants electric and hybrid vehicles to make more noise when traveling at low speeds so pedestrians can hear them coming.

The cars and trucks, which are far quieter than conventional gasoline or diesel-powered vehicles, don't make enough noise at low speeds to warn walkers, bicyclists and the visually impaired, the [National Highway Traffic Safety Administration](#) said Monday in a statement.

The proposed rule would require the cars to make additional noise at

speeds under 18 miles per hour (29 kph). NHTSA says the cars make enough noise to be heard at higher speeds.

[Automakers](#) would be able to pick the sounds that the cars make from a range of choices. Similar vehicles would have to make the same sounds. And the government says pedestrians must be able to hear the sounds over background noises.

The public has 60 days to comment on the proposed rule. The agency will use public input to craft a final rule.

NHTSA estimates that the new noise would prevent 2,800 pedestrian and cyclist injuries during the life of each model year of electric and hybrid vans, trucks and cars.

The rule is required by the [Pedestrian Safety](#) Enhancement Act that was passed by Congress in 2010.
