

Tehran governor orders shutdown over pollution

January 3 2013

View taken from a vantage point in the north of Tehran shows the capital covered in smog on December 3, 2012. Schools, universities and government offices in the Iranian capital will be closed on Saturday for the second time in a month because of high air pollution, Tehran governor Morteza Tamadon said Thursday.

Schools, universities and government offices in the Iranian capital will be closed on Saturday for the second time in a month because of high air pollution, Tehran governor Morteza Tamadon said Thursday.

Emergency services also advised residents to avoid unnecessary travel in the city, the ISNA news agency reported.

Tamaddon said a pollution committee took the decision after smog failed to dissipate over the past three days, the Mehr news agency reported.

"Closure is not the solution but it is the best decision, considering the prolonged high level of pollution indicators," he said, adding that current level of pollution was expected to last another three days.

Only emergency and health services would report for work, he said.

A similar measure was taken on December 3 when [air pollution](#) blanketed Tehran, with former [health minister](#) Marzieh Vahid Dastjerdi urging residents to leave the city.

On Thursday, vice president for environmental protection Mohammad Javad Mohammadizadeh told state television that traffic restrictions would also be applied.

Tamaddon said all sports activities would also be suspended until early next week.

Blamed mainly on bumper-to-bumper traffic, the [pollution](#) is a constant woe for the eight million residents of a city wedged between two mountains which trap fumes over Tehran.

Western sanctions on fuel imports have also forced Iran to rely on domestic production of petrol of a lower grade, and therefore more polluting, than in many other countries.

Efforts by officials to boost public transport, including extending the metro and establishing lanes for buses only, have barely dented the

problem because of the growing number of cars, many of which are old and inefficient.
