

Quake off Indonesia causes panic in East Timor

February 24 2013

(AP)—An undersea earthquake has rocked eastern Indonesia, causing panic among residents in neighboring East Timor. There were no immediate reports of injuries or damage.

The U.S. Geological Survey says the magnitude-5.7 quake that struck Saturday evening was centered 202 kilometers (126 miles) east of East Timor's capital, Dili, at a depth of 35 kilometers (22 miles).

Witnesses in Dili say residents ran out of their houses in panic, with many staying outside in fear of aftershocks.

Indonesia's Meteorology and Geophysics Agency put the quake's magnitude at 6.2 with a depth of 10 kilometers (6 miles).

Indonesia and East Timor are prone to seismic upheaval due to their location on the Pacific "Ring of Fire," an arc of volcanoes and [fault lines](#) encircling the Pacific Basin.
