SpaceX's Dragon spacecraft [has arrived at the International Space Station](#). After overcoming a problem with its thrusters after reaching orbit on Friday, today, Dragon successfully approached the Station, where it was captured by Expedition 34 Commander Kevin Ford and crewmate Tom Marshburn using the station's Canadarm2 robotic arm.

Dragon was grappled at 5:31 a.m. EST, and was berthed to the Earth-facing port of the Harmony module at approximately 8:56 a.m. EST on March 3.

Above, Canadian astronaut Chris Hadfield snapped a photo of Dragon as it approached the station over sub-Saharan Africa. "A surreal juxtaposition," Hadfield said via Twitter.
