

Google Glass for consumers will 'take a while', Schmidt says

April 26 2013

US blogger Robert Scoble presents the Google Glass on April 24, 2013 at the "NEXT Berlin" conference in Berlin.

Consumers can expect to wait a while before they're able to lay their hands on Google's much-hyped Internet-connected eyewear, Google executive chairman Eric Schmidt said Friday.

Google recently began shipping Google Glass to software developers who signed on to experiment with the device—which integrates a [tiny camera](#) and [voice recognition technology](#)—at a cost of \$1,500 a pair.

"You should assume that it will take us a while" to take stock of their feedback, said Schmidt when asked, at a seminar in Washington on the Internet and freedom of expression, when Google Glass might reach consumers.

"It's extremely early," he said. "Think of this as beta testing, and Google beta-tests for a while and hopefully we get it right."

As for another ambitious Google project, self-driving vehicles, he said: "The timeline is years, not decades—but not months. Again, it's in the R and D (research and development) stage."

Google Glass, which is powered by Android software, and cars synched to the Internet could potentially enhance the search-engine conglomerate's money-making services, such as [online maps](#).
