

# Greenpeace 'polar bears' protest Arctic oil drilling

April 10 2013

---

A Greenpeace activist dressed as a polar bear holds a banner reading 'Arctic Not For Sale' before climbing onto the drilling rig West Hercules at an upgrading facility in Olen, Rogaland in Western Norway, in a photo released by Greenpeace. Two Greenpeace activists dressed as polar bears boarded an oil platform in Norway on Wednesday to protest against Norwegian planned drilling in the Arctic.

Two Greenpeace activists dressed as polar bears boarded an oil platform in Norway on Wednesday to protest against Norwegian oil and gas group

Statoil's planned drilling in the Arctic.

"No oil company in the world is prepared for Arctic conditions," said the head of Greenpeace Norway, Truls Gulowsen, one of the two activists who boarded the West Hercules platform currently stationed in Oelen in southwestern Norway.

"It is unacceptable that Statoil wants to gamble with safety and the environment in the vulnerable [Arctic regions](#)," he added in a statement.

Greenpeace sent two "[polar bears](#)" to "inspect" the platform and to raise public awareness about the dangers of oil activities in the Arctic, a region with [extreme climate](#) conditions and located far from mainland infrastructures.

The West Hercules is scheduled to be sent this month to the Norwegian waters of the Barents Sea, which is normally ice free, to conduct a prospecting campaign that is expected to last into 2014.

The campaign, which calls for up to nine [drilling operations](#) including some in zones very far north, is already several months behind schedule.

"Preparing the platform took longer than expected," Statoil spokesman Ola Anders Skauby said.

After changes to the West Hercules' route, operations in the northernmost zones have been postponed but are still planned.

"We are always evaluating the pace of our drilling in light of our resources and our priorities and there is nothing dramatic" about the changes, Skauby said.

After Shell and Statoil both postponed their respective drilling

campaigns in Alaska, Greenpeace said it believes the major oil companies are realising how difficult it is to operate in the Arctic.

"The oil industry is beginning to understand that drilling in the Arctic is much more difficult than it had us believe," Gulowsen told AFP.

According to a 2008 study by the [US Geological Survey](#), the Arctic could hold up to 22 percent of the world's undiscovered oil and gas reserves, resources which have become more accessible in recent years as the Arctic ice melts.

Norway's oil production has been in steady decline for more than a decade. But the country recently raised its estimates for its oil and gas reserves, due to the Barents Sea reserves.
