

Smartphone cradle, app detect toxins, bacteria (w/ Video)

August 1 2013

Kenny Long, a graduate researcher studying engineering and medicine at the University of Illinois, Urbana-Champaign works with a handheld biosensor based on an iPhone, is shown in this June 21, 2013 photo in Urbana, Ill. (AP Photo/Michael Conroy)

Afraid there may be peanuts or other allergens hiding in that cookie? Thanks to a cradle and app that turn your smartphone into a handheld biosensor, you may soon be able to run on-the-spot tests for food safety,

environmental toxins, medical diagnostics and more.

The handheld <u>biosensor</u> was developed by researchers at the University of Illinois, Urbana-Champaign. A series of lenses and filters in the cradle mirror those found in larger, more expensive laboratory devices. Together, the cradle and app transform a smartphone into a tool that can detect toxins and bacteria, spot <u>water contamination</u> and identify allergens in food.

Kenny Long, a graduate researcher at the university, says the team was able to make the smartphone even smarter with modifications to the cellphone camera.
