

Watch all six Apollo Moon landings at once

October 23 2013, by Nancy Atkinson

Apollo moon landing sites.

So often, when we think of all the Apollo missions to the Moon, we recall the videos of the astronauts walking, jumping and driving around on the Moon. But the actual landing of the Lunar Module was such a key – if not nail-biting – part of the mission. Here in this video you can watch all six Apollo lunar landings at once.

The footage uses the original descent camera coverage, realigned by the person who put this together – [lunarmodule5 on YouTube](#)—to 45 degrees to show what the [lunar module](#) pilots saw on the descent. There's also the actual audio from all the landings. It's amazing to hear both calm and

anxiety in the voices of the LMP, Commander and Mission Control, as well as the jubilation after landing.

You can also watch all thirteen Saturn V launches at once in the video below—Apollo 4 thru Skylab with the Apollo 4 CBS audio added.

Best to go full-screen on these!
