

Microsoft makes IE 11 browser work for Windows 7

November 7 2013

Microsoft Corp. said Thursday that it has made its latest browser, Internet Explorer 11, available to users of Windows 7 machines.

The new browser had already been part of the Windows 8.1 upgrade the company released last month.

The browser, available as a free download, improves the performance of websites that use JavaScript. Microsoft says the browser is 9 percent faster than Internet Explorer 10.

It also enables better 3-D graphics rendering in websites, allowing users

to manipulate 3-D objects on-screen.
