A college professor who played a supersized video game on the side of a Philadelphia skyscraper now holds a Guinness world record for the feat.

Drexel University professor Frank Lee recreated the classic Atari game Pong on the 29-story Cira (SEHR'-ah) Centre last spring.

The building essentially became a 60,000-square-foot screen as hundreds of embedded LED lights replicated the familiar ball and paddles, which were controlled by a joystick about a mile away.

Drexel officials learned on Friday the project earned Lee the Guinness World Record for largest architectural [video game](#) display.

Other gaming enthusiasts got to share in the fun in April. Players also tried out giant versions of Space Invaders and Tetris.
