

Join in the Cassini name game

April 11 2014

In its next phase, NASA's Cassini spacecraft will perform 22 loops between Saturn and its innermost ring. Credit: NASA/JPL-Caltech

As NASA's Cassini mission approaches its 10th anniversary at Saturn, its team members back here on Earth are already looking ahead to an upcoming phase.

Starting in late 2016, the Cassini spacecraft will repeatedly climb high above Saturn's [north pole](#), flying just outside its narrow F ring. Cassini will probe the water-rich plume of the active geysers on the planet's intriguing moon Enceladus, and then will hop the rings and dive between the planet and innermost ring 22 times.

Because the spacecraft will be very close to Saturn, the team has been calling this phase "the proximal orbits." But they think someone out there can conjure up a cooler name. Here's where you come in: you can choose your faves from a list already assembled, or you can submit your own ideas (up to three). The big reveal for the final name will be in May 2014.

This naming contest is part of the 10-year anniversary celebration. The mission will mark a decade of exploring Saturn, its rings and moons on June 30 PDT (July 1 EDT).

For more information on the contest, visit: saturn.jpl.nasa.gov/name target="_blank">saturn.jpl.nasa.gov/name
