Tropical Cyclone Diamondra is currently in the middle of the Indian

Ocean and is not threatening any land masses at this time.

Its movement during the past six hours have been south-southeastward at 5 kph. Diamondra is located approximately 936 miles south southeast of Diego Garcia.

The satellite imagery shows diminishing convection and winds in the storm. It has been downgraded to a [subtropical cyclone](#).

The Joint Typhoon Warning Center will continue to monitor the storm for signs of regeneration, but at this time, this will be the storm's last update unless conditions change.
