

LG to launch curved G Flex 2 smartphone next week

January 22 2015, by Youkyung Lee

LG Electronics Inc. said it will start selling a new curved smartphone next week in its latest effort to bring the curve to a mass market.

The South Korean company said Thursday that the G Flex 2 will be launched locally on Jan. 30 and overseas in coming months.

Curved screens are a way of differentiating high smartphones that have come to share many similar features such as high resolution displays and powerful cameras.

When LG released its first version of a curved [smartphone](#) in 2013, it was a niche product. The latest iteration shows LG is targeting a bigger market.

The phone features a 5.5-inch screen curved from top to bottom. In an improvement from its predecessor, the phone's self-healing back can repair scratches in seconds rather than minutes. LG said both the screen and the body are more resilient to shocks than other phones.

LG's hometown rival Samsung Electronics Co. is also experimenting with curved screens. Last year, Samsung released the Galaxy Note 4 Edge, which has a screen on its curved edge that displays information.

LG did not give a sales target but executive vice president Cho Sung-ha said the company expects sales of the G Flex 2 to be higher than its predecessor.

LG did not adopt some of the latest technologies for the G Flex 2, such as quantum dot displays. Instead it has a full high-definition screen.

The G Flex 2 will sell for nearly 900,000 won (\$830) in South Korea.
