

Scotland to ban GM crops

August 9 2015

Scotland is set to ban the cultivation of genetically modified (GM) crops, officials announce

Scotland is set to ban the cultivation of genetically modified (GM) crops, officials announced Sunday.

It is set to implement the move under European Union rules introduced earlier this year which allow countries to opt out of growing the crops, a statement from the Scottish government said.

"The Scottish government will shortly submit a request that Scotland is excluded from any European consents for the [cultivation](#) of GM crops, including the variety of genetically modified maize already approved and six other GM crops that are awaiting authorisation," the statement said.

The Scottish government in Edinburgh has responsibility for some mainly domestic policies including agriculture since power was devolved from the British government in London in 1999.

While no GM crops are currently grown commercially in Britain, the government in London supports the use of GM crops as long as they are assessed to be safe.
