

Colorado team says possible new dinosaur found in Montana

September 18 2015, by Mary Clare Jalonick

Experts at the Rocky Mountain Dinosaur Resource Center are confident the bones found by a team in Montana are those of a previously undiscovered species.

The Colorado Springs Gazette reports outside [experts](#) will confirm whether this is indeed a [new species](#) of dinosaur, nicknamed Ava due to its resemblance to the plant-eating Avaceratops.

Center Curator Anthony Maltese is a member of the Triebold Paleontology Inc. field excavation team. The firm has been uncovering the [skeleton](#) since 2012.

Maltese says there were enough differences between Ava and the Avaceratops that researchers were sure they'd found something new.

The skeleton was used to make a replica that was unveiled in an exhibit Wednesday at the center in Woodland Park, Colorado.
