

Firefighters contain deadly Australian bushfire

January 11 2016

Fireman inspect the damage near Waroona, 70 miles south of Perth, after a huge bushfire which has razed about 71,000 hectares in Western Australia state

Cooler temperatures and easing winds Monday helped firefighters contain a bushfire that killed two people and razed 143 properties, with clean-up efforts getting underway.

The inferno, sparked by lightning six days ago, burnt through 71,000

hectares (175,000 acres) in Western Australia state, leaving a trail of destruction, the latest in a series of summer blazes that have so far left eight people dead.

"The [weather conditions](#) are great today and they were in the last 24 hours so we have been able to essentially contain this fire," Western Australia's Emergency Services Minister Joe Francis told national radio.

"It's not totally under control yet but we are very optimistic about the next 24 hours as well."

Alert levels have been downgraded from emergency to watch and act for towns in the area including Waroona, Hamel and Yarloop, a historic mill community some 110 kilometres (70 miles) south of Perth where two bodies were found in the blackened ruins of burnt-out houses.

The fire, one of the worst to hit the region in recent years, destroyed 143 properties, including 128 homes in Yarloop which was virtually flattened, the state's Department of Fire and Emergency Services (DFES) said.

Firefighters say they have contained the bushfire which started by lightning six days ago and which has left a trail of destruction in Western Australia

Western Australia's state premier Colin Barnett has declared a natural disaster, giving residents access to greater financial support, with the Insurance Council of Australia estimating losses of at least Aus\$60 million (US\$42 million).

Francis said he was "exceptionally proud" of the efforts of hundreds of firefighters, many of them volunteers.

"They put themselves through significant danger to get through some exceptionally difficult fires to save people's lives," he said.

Bushfires are common in Australia's hotter months, with four deaths in Western Australia in November. Another two people perished in

neighbouring South Australia state in the same month.

DFES commissioner Wayne Gregson warned on Sunday that the worst of the bushfire season was yet to come.

"There is still another 10 or more weeks to go in what is predicted to be a difficult bushfire season," he said.

Australia's worst firestorm in recent years devastated parts of the southern state of Victoria in 2009, destroying thousands of homes and killing 173 people.
