

# Report: Holiday shopping online spurred by mobile sales

January 8 2016, byMae Anderson

---

It was the year smartphones saved Santa.

As expected, numbers out Friday from research firm comScore confirmed [mobile shopping](#), which includes smartphones and tablets, jumped in November and December, spurring on holiday retail sales this year.

Online shoppers are increasingly comfortable with shopping on smartphones as screen sizes get larger and shopping apps get better.

"I believe that we've seen a [paradigm shift](#) in 2016 where the future of retail will increasingly be defined by consumers' behavior on mobile," said comScore chairman emeritus Gian Fulgoni.

Total online spending during November and December rose 13 percent to \$69.08 billion from \$61.29 billion last year, slightly short of the 14 percent rise comScore, based in Reston, Va., was expecting.

Spending on desktops rose 6 percent to \$56.43 billion, short of comScore's expectations of an 8 percent rise to \$58.3 billion.

But [mobile commerce](#) helped make up some of that shortfall. Shopping on smartphones and tablets jumped 59 percent to \$12.65 billion, well above the 47 percent rise comScore was expecting.

Mobile commerce accounted for 18 percent of total online spending, up

from 13 percent last year.

Cyber Monday, Nov. 30, was once again the top spending day of the year with more than \$2 billion in desktop buying for the second year in a row.
