

3-D candy-maker billed as world's first arrives in New York

May 20 2016

Now there's yet another market for 3-D printer-enthusiasts: candy.

Dylan's Candy Bar has linked up with Magic Candy Factory to launch 3-D printing of confection in their stores.

Billed as the first 3-D printer for candy—or any food for that matter—it made its debut Friday in New York. Melissa Snover, founder of Magic Candy Factory, said the possibilities are as limitless as your imagination.

"With the product you're able to create any customized candy that you can imagine. You can write words, you can upload images like photographs and create hundreds of different shapes, on demand in any color and flavor," she said Thursday.

However, when given the opportunity, most apparently aren't very creative.

"We were really surprised when we found out that over 70 percent of people make their name," she said.

The candy is made of [pectin](#), which is apple-based.

The 3-D candies will roll out in Dylan's Candy Bars nationwide in the next few weeks.
