Federal aviation officials estimate there will be 600,000 commercial drone aircraft operating in the U.S. within the year as the result of new safety rules that went into effect on Monday, Aug. 29, 2016. Huerta said at a news conference that the rules governing the operation of small commercial drones are designed to protect safety without stifling innovation. (AP Photo/Julio Cortez, File)

There will be 600,000 commercial drone aircraft operating in the U.S. within the year as the result of new safety rules that opened the skies to them on Monday, according to a Federal Aviation Administration estimate.

The rules governing the operation of small commercial drones were designed to protect safety without stifling innovation, FAA Administrator Michael Huerta told a news conference.

Commercial operators initially complained that the new rules would be too rigid. The agency responded by creating a system to grant exemptions to some of the rules for companies that show they can operate safely, Huerta said.

On the first day the rules were in effect the FAA had already granted 76 exemptions, most of them to companies that want to fly drones at night, Huerta said.

"With these rules, we have created an environment in which emerging technology can be rapidly introduced while protecting the safety of the world's busiest, most complex airspace," he said.

Transportation Secretary Anthony Foxx said people are "captivated by the limitless possibilities unmanned aircraft offer." The few thousand commercial drones that had been granted waivers to operate before Monday have been used to monitor crops, inspect bridges and transmission lines, assist firefighters, film movies, and create real estate and wedding videos, among dozens of other uses.

In general, the new rules apply to drones weighing 55 pounds or less, and require [commercial operators](#) to:

—Keep the drone within sight at all times.

- Keep [drones](#) from flying over people not involved in their operation.
- Limit drone operations to the hours from a half-hour before sunrise to a half-hour after sunset.
- Limit speed to no more than 100 mph.
- Fly no higher than 400 feet.

Drone operators must also pass a test of their aeronautical knowledge administered by the FAA. More than 3,000 people had registered with the FAA to take the test as of Monday.

The Air Line Pilots Association complained that the new regulations are "missing a key component" because there's no requirement that [drone operators](#) first have an FAA pilot license to fly a plane. The FAA considered requiring drone operators to have manned aircraft pilot licenses, but relented when the drone industry complained that the time and expense involved in obtaining a license, including considerable time practicing flying a plane, would be prohibitive.
