

Canadian zoo probing penguin drowning deaths

December 9 2016

A veterinary team performed autopsies on Humboldt penguins and established drowning as the cause of death

A Canadian zoo has launched an investigation into the mysterious drowning deaths of seven Humboldt penguins.

"This is devastating news," said Jamie Dorgan, the director of animal care at the Calgary zoo in western Canada.

"We have launched a full investigation so we can try to understand what happened and prevent further incidents like this from happening again."

The [penguins](#) were found dead in their normal holding area, the zoo said. Its veterinary team performed [autopsies](#) on the birds and established drowning as the cause of death.

There were 22 penguins living in the zoo's Humboldt colony, along with three other penguin species.
