

Self-driving truck hits the road for debut on Ohio Turnpike

December 1 2016

A self-driving big rig is rolling down the Ohio Turnpike for the first time.

The debut of the self-driving truck on Thursday is part of Ohio's \$15 million investment in advanced self-driving highway technology.

State officials say the turnpike is a good place to start the testing because it's a relatively straight and flat route with wide lane markings.

Turnpike officials say there will be a driver in the truck as a backup during testing.

Ohio is among several states competing to play a role in the testing and research of [autonomous vehicles](#), which is advancing.
