

Thousands of geese die after landing in toxic US water

December 7 2016

As many as 10,000 snow geese descended on the abandoned open Berkeley Pit in Butte, Montana on November 28, 2016 and since then several thousand have perished

Thousands of migrating geese have died after taking refuge from a snowstorm in toxic mine waters in the western United States, mine officials have said.

As many as 10,000 [snow geese](#) descended on the abandoned open Berkeley Pit in Butte, Montana on November 28 and since then several

thousand have perished, said Mark Thompson, environmental affairs manager for Montana Resources, which jointly manages the pit with the Atlantic Richfield Company.

Thompson told the Montana Standard Tuesday that mine workers tried to prevent the huge flock from landing on the water—which contains [sulfuric acid](#) and heavy metals—by using noise makers, spotlights and other methods but failed to scare them all off.

He described the pit's 700-acre (280-hectare) lake as "white with birds" when the flock landed on the water.

Since then, area residents have found dead birds in parking lots, in front of a casino, on the roadside and outside town. Thousands more are estimated to have died in the lake according to drone and flyover footage, officials say.

"Trying to get some idea of mortality has been difficult," Joe Vranka of the Environmental Protection Agency (EPA), told the Billings Gazette.

Some of the birds have been found alive in and around Butte and officials said rescuers were trying their best to save them.

Meanwhile both the company and the EPA are keeping a close watch to prevent any additional flocks headed toward Butte from landing in the water.

This is not the first time geese have died at the pit, which ceased operating in 1982 and has since been submerged with toxic water.

In 1995, 342 dead geese were found floating in the pit.

EPA officials said the companies that manage the mine will be fined if

found not in compliance with a "bird hazing" program designed to prevent animals from spending too much time in the [water](#).

The strategy includes firing off shotguns in the air and loud noises to scare off birds.
